- Testing and maintaining the database solution
- Administration of the Server infrastructure
- Migration and consolidation of servers and databases across environments
- Architect and deploy data and application solutions
- Performance assessments and disaster recovery tests
- Tuning and optimisation of databases

JOB DESCRIPTION

- Designing, installation, administration and improvement of current database servers
- Testing and maintaining the database solution, including monitoring of system health and performance, to ensure high levels of performance, availability, and security
- Administration of the Server infrastructure - from development to mission-critical production systems
- Migration and consolidation of servers and databases across environments
- Architect and deploy data and application solutions
- Performance assessments and disaster recovery tests
- Tuning and optimisation of databases
- Analysing, solving & correcting issues, providing end-to-end problem resolution
- Refining and automating regular processes, with documentation and reporting
- Sharing technical expertise, providing technical mentorship and cross-training to other peers and team members

HOW MUCH THEY COST

Hiring costs vary by location, seniority, job scope, benefits, etc. However, by looking at an average DBA salary vs the cost of outsourcing your database management we are looking at the following figures

£80,000* + per year

£6,800** per year

Pay per DBA

Pay per Database

*For an experienced DBA you need to cover costs of salary, NI and other benefits.

However, the cost doesn't multiply based on the number of databases added to support. The cost is incremental - with a volume discount.

To support your databases 24-7 requires at least three DBAs with potentially additional resource required to cover holidays and sickness. This all adds up to a DBA function costing well over £250k per year, plus the expense of training and recruitment fees.

** Costs might vary depending on clients' requirements.

Fees are agreed upfront and paid annually or monthly. In this way, budgets are easier to plan and IT costs can be more tightly controlled.

OUTSOURCE DBA FUNCTIONS TODAY

WellData is one of the UK's leading Database managed service providers, offering a reliable, secure and low-cost way of enhancing database performance without employing expensive DBAs. Founded in 1999, we help businesses of all sizes to increase the availability, reliability and security of their databases. Get a free consultation and outsource DBA functions today
